EXECUTIVE SUMMARY

America's entrepreneurs don’t ask for much. They embrace the future by building it themselves, working toward goals with the spirit and drive to overcome every hurdle in their paths. But too often and for too long, America’s policymakers have taken that spirit and drive for granted. Being “pro-business” has come to represent favoring big business in today’s politics. And when government does act to help American enterprise, support is heavily skewed toward established businesses — not scrappy and striving new business owners and entrepreneurs. This is despite the fact that new businesses created by entrepreneurs are the primary source of almost all net new jobs.¹

Making it easier for everyday Americans to start their own businesses is essential for creating economic growth that works for everyone. After all, this is what the American Dream is all about: the belief that anyone, regardless of who they are or where they are from, has the opportunity to make a better life. Unless leaders move quickly to reduce unnecessary barriers and expand the circle of American entrepreneurs, the United States will no longer be the most innovative nation with the most dynamic economy on Earth.

America’s New Business Plan puts the ambitions and can-do spirit of everyday Americans first through a four-part entrepreneurship plan that ensures anyone with an idea has access to the opportunity, funding, knowledge, and support to turn it into a reality.

OPPORTUNITY ★ A Level Playing Field and Less Red Tape
When it comes to starting a business, entrepreneurs need a level playing field to compete with established businesses, which have better access to policymakers. Among other things, this means economic development efforts should support local business owners and not just offer incentives to attract outside businesses. Policymakers should prioritize the development of supportive ecosystems that help everyday Americans start businesses and they should cut red tape that holds people back.

FUNDING ★ Equal Access to the Right Kind of Capital Everywhere
Entrepreneurs continually emphasize the need for access to capital, including patient capital and other innovative models that give them an opportunity to get their businesses off the ground. These funding streams must extend beyond the coasts and reach deep into the heart of America to serve communities that lack access to capital and populations that are underrepresented as entrepreneurs.

KNOWLEDGE ★ The Know-How to Start a Business
Starting a business is a courageous act, and far too many entrepreneurs take that risk without really knowing where to begin or understanding the requirements and barriers that come with turning an idea into reality. Policymakers can help by supporting policies that connect entrepreneurs to those who can show them the ropes and programs that teach entrepreneurs the skills needed to successfully launch a business. Policymakers can ensure a strong current of new entrepreneurs and their employees by embedding real world learning in classrooms — sharpening workplace skills such as communication, problem-solving, judgement, and decision-making.

SUPPORT ★ The Ability for All to Take Risks
Becoming an entrepreneur means leaving behind the stability of a traditional job, and with it benefits such as health care and retirement savings. Most importantly, it often means forgoing a stable salary — a daunting proposition for anyone, but especially for the many Americans living paycheck to paycheck or with little savings. Policymakers must act to ensure the next generation of entrepreneurs is not locked out of opportunities to improve their economic situations by addressing Americans’ real financial concerns that limit risk-taking.

A PARADIGM SHIFT: AGE, NOT SIZE

Policymakers often think of small businesses as the employment engine of economic growth. But when it comes to job creation, it is not the size of the business that matters as much as the age of the business. Businesses that are less than 5 years old create nearly all of the net new jobs in the American economy, including fueling net new job creation during economic downturns.²

Net Job Creation by Firm Age, 2000-2018

Data from the Bureau of Labor Statistics

Policymakers must shift their focus to think in terms of age, not size. Accordingly, the federal government should create a standard definition of “new businesses” as those less than 5 years old. Codifying the distinction between the age and size of a business and providing policy support for new businesses across each stage of the entrepreneurial journey will better enable everyday Americans to start businesses and, in the process, employ millions.

What Federal Policymakers Can Do To Tap America’s Entrepreneurial Spirit

OPPORTUNITY ★ A LEVEL PLAYING FIELD AND LESS RED TAPE

Create an Entrepreneurship Impact Statement
Nearly three-quarters of entrepreneurs believe that government regulations on businesses are complex and hard to follow. Another 65% say that it is too time-consuming for business owners to stay legally compliant with local, state, and federal regulations. While retroactively addressing laws that have had negative effects on entrepreneurs is critical, it is not enough. It is imperative that entrepreneurs be considered from the start as new laws and policies are enacted. To do so, Congress should:

_require an Entrepreneurship Impact Statement (EIS) for all new laws, regulations, and rules developed that affect businesses less than 5 years old. The EIS would require the Congressional Budget Office and issuing agencies to estimate the direct costs to new businesses (i.e., those less than 5 years old) of changes to laws and regulations so that policymakers become aware of the impact these policies would have on new businesses before bills are passed or new regulations issued.

Streamline the Process of Starting a Business
Too often, the regulatory requirements of starting a business are unclear for entrepreneurs. This is especially the case when starting a brick-and-mortar business. Conflicting information from various local regulatory bodies can cause delays that are far costlier than just the added time to become compliant. To entrepreneurs, it may mean more time paying rent on a commercial space with no revenue or income, and it can often be the difference between a successful enterprise and one that is forced to close its doors far too early. Even seemingly insignificant fees and forms can add up to have a detrimental effect. Government should support the following solutions:

>Create federal incentives for local authorities to reduce barriers to starting businesses, even down to the smallest fees and forms.

Require coordination across agencies to simplify all federal, state, and local procedures, forms, licenses, and permits required to start a business.

Create a single list of all requirements to start any business and easy-to-read guides that walk entrepreneurs through the permitting process. These should be translated into multiple languages and posted in public offices and in an easy-to-find location online.

4 Ibid.
Unleash the Job-Creating Power of Immigrant Entrepreneurs

Coming to America is an entrepreneurial exercise in and of itself, and tapping more talented people from around the world to use their skills to start and grow businesses here is good for the United States and its global economic competitiveness. Yet current immigration policy makes it difficult for foreign-born entrepreneurs to receive a green card (i.e., permanent residency). Immigration reform is needed to unlock the potential of immigrant entrepreneurs in the United States. The federal government should:

- Establish a startup visa that authorizes foreign entrepreneurs to start businesses in the United States.

Unlock Entrepreneurial Activity by Reforming Noncompete Agreements

The free movement in and out of jobs is essential for a dynamic, entrepreneur-driven economy. Yet many states enforce employer noncompete agreements that lock employees into their current jobs and hamper new business creation. To curb the negative impacts of noncompete agreements on entrepreneurship, policymakers should:

- Restrict the use of noncompetes through outright bans or by shortening the maximum duration of these contracts and narrowing the scope of industries and jobs for which noncompetes may be used.
- Improve transparency by requiring employers to disclose their intent to use a noncompete in job postings and offers.

Rein in Occupational Licensing

Occupational licensing erects barriers to workers entering certain fields and to prospective entrepreneurs creating businesses that can compete with incumbent firms benefiting from licensing protection. Policymakers should:

- Replace licensing with less onerous forms of regulation, such as certifications or permits, in industries where public health is not seriously threatened.
- Streamline remaining licensing requirements. States can develop regional or interstate compacts to ensure occupational licenses are transferable to or recognized by neighboring states, just like a driver’s license. Federal pre-emption would accomplish a similar purpose.
- Reduce blanket bans and “good character” clauses in remaining licensing requirements, which erect barriers to entrepreneurship for the formerly incarcerated.

FUNDING ★ EQUAL ACCESS TO THE RIGHT KIND OF CAPITAL EVERYWHERE

Make a National Commitment to Expanding Access to Capital for All Entrepreneurs

Too many Americans have been denied the opportunity to turn their ideas into businesses because they lacked the funding required to do so. Between 90% and 95% of entrepreneurs who hire employees require some amount of financing to start their businesses, making capital a critical requirement for new business creation. However, many government programs meant to provide capital to entrepreneurs are biased in favor of established businesses instead of newer businesses. To address the significant and persistent gaps in access to capital, the president should announce a public-private partnership to close such gaps for entrepreneurs everywhere by 2030. In doing so, the president should:

- Instruct the U.S. Department of the Treasury, Small Business Administration (SBA), and other relevant departments and agencies to make concrete recommendations for how existing capital access programs can be improved to reflect the fact that the age of a business, not its size, is the key factor in job creation, and to direct more support to entrepreneurs launching new businesses.

- Request that Congress make substantial funding available to states for strengthening the private financing of new businesses by expanding capital access through patient capital, innovative investment models and technologies, financing guarantees, user-centered service design, community banking, and other means.

- Establish clear goals for all federal capital access programs, including the number of new entrepreneurs who access capital (disaggregated by race, gender, socioeconomic class, and geography), revenues generated, new jobs created and sustained, and customer experience feedback.

- Incentivize financial innovation that addresses gaps in capital access by spurring the creation of new funding models and technologies that serve all types of new businesses, especially those currently underserved by the capital marketplace.

- Incorporate lessons learned from past and current government programs, including the State Small Business Credit Initiative, SBA loan guaranty programs, and Small Business Investment Company.

- Ask governors and mayors to examine how their state and local ecosystems can be improved to increase access to capital for all entrepreneurs.

---

Unleash Online Tools to Drive Alternative Funding Opportunities into the Heartland

While venture capital is highly concentrated, crowdfunding and other online tools have the potential to drive innovative funding sources to entrepreneurs throughout the American heartland. To spur more online financing activity, policymakers should:

- Raise the Regulation Crowdfunding offering limit so new businesses requiring larger amounts of capital may utilize this tool.
- Create tax incentives for investors purchasing securities offered by new businesses through qualifying crowdfunding channels.
- Improve regulatory flexibility and reduce compliance burdens in crowdfunding.
- Expand the nation’s investor base by updating accreditation standards to allow more investors with high financial sophistication to participate.
- Create standards that ensure transparency and fair treatment of new and small businesses by online technology-based lending firms.
Develop Inclusive Entrepreneur Support Mechanisms
One of the biggest advantages for an entrepreneur with a new idea or business is getting support from skilled professionals, such as through strong networks, cooperative platforms, co-working hubs, and high-quality incubators and accelerators. Government should support the growth and development of those methods and others to connect entrepreneurs with helpful people and tools. Policymakers should:

- Develop competitive grants to modernize the 63 Small Business Development Centers (SBDCs) and more than 900 service locations, with a focus on facilitated learning through connections and peer support in entrepreneurial ecosystems.

- Create pay-for-success models that provide federal support to organizations that serve entrepreneurs when certain agreed-upon benchmarks are met, such as the number of new businesses created, ease of accessing appropriate capital, increased revenues, new jobs created and sustained, and underserved areas and populations reached.

Integrate Entrepreneurship into K-16 Education
To ensure that a strong current of entrepreneurial talent is continuously emerging in the United States, policies must jumpstart the stagnant rate of new entrepreneurs, grow the next generation of business owners, and develop employees with entrepreneurial capabilities. To do this, policymakers should:

- Embed entrepreneurial know-how and spirit in classrooms throughout America by creating opportunities for students to explore and acquire the habits of mind, behaviors, skills, knowledge, and competencies that equip them to be entrepreneurial – whether by creating businesses themselves or by making contributions as employees and community members.

- Provide students with real world learning experiences through project-based learning, client-based projects, and internships.

- Give students opportunities to explore design thinking and prototyping, problem-solving and communications, as well as ensuring all students are leaving high school with basic financial literacy skills.

Create an Entrepreneurship Corps, or “E-Corps”
To connect established entrepreneurs with new and struggling ones, especially those from underserved backgrounds, the Small Business Administration (SBA) and the Corporation for National and Community Service (CNCS) should:

- Collaborate to develop an Entrepreneurship Corps, or “E-Corps,” to mentor and train entrepreneurs. The SBA should create a plan to deploy E-Corps members to underserved communities across the United States that apply for specific assistance.
Foster Pro-Entrepreneur Workforce Education and Training Programs

Current workforce training programs in the United States, especially for those displaced by automation or globalization, have shown to result in only modest gains in employment and wage increases.\textsuperscript{11,12} The Government Accountability Office (GAO) looked at federal employment and job training programs and found that “in FY2009, nine federal agencies spent approximately $18 billion to administer 47 programs,” while also noting that “little is known about the effectiveness of most programs.”\textsuperscript{13} Given this mixed record of federal workforce development programs, it is time for an overhaul to achieve better results. In the process, policymakers should give workers fresh options, including approaches that educate and train individuals where America has its greatest potential economic strength — its entrepreneurs. Federal policymakers should:

- Prioritize entrepreneurial skill-building, access to networks, and new business creation as key components of workforce training programs.
- Significantly expand the number of entrepreneur support organizations (ESOs) that receive workforce training funding.
- Empower the 3,000 One-Stop centers to be user-friendly outlets for information about entrepreneurship and to provide support for more Americans wishing to start their own businesses.
- Include entrepreneurship and applicable information and tools in workforce training programs to help tens of thousands of young Americans start their own businesses.

SUPPORT ★ THE ABILITY FOR ALL TO TAKE RISKS

Provide Health Care Options for Early-Stage Entrepreneurs
For an unmarried potential entrepreneur over the age of 26, the security of employer-sponsored health insurance can prevent risk-taking. This dilemma contributes to "job lock," a situation in which employees stay at their current jobs because leaving would result in the loss of benefits they value. To reduce the effects of job lock, policymakers should:

- Facilitate the development of a system of portable benefits that follow workers as they move across jobs or out of the workforce to start a business.
- Provide tax incentives to new businesses to offset health care costs.

Provide Entrepreneurs Relief from Student Loan Debt
In 2011, cumulative outstanding student loan debt in the United States surpassed $1 trillion.14 Between 2004 and 2014, the number of student loans increased 89%, and the average debt grew 77%.15 As student loan debt continues to grow, the burdens on the behaviors of those incurring the debt are still not fully known. What’s more, as student loan debt has increased, so too has the amount of time it takes for individuals to pay off their loans. A growing body of research has begun to point to student loan debt as a contributing factor to depressed rates of entrepreneurship, especially among younger generations.16 To avoid a lost generation of entrepreneurial talent, policymakers need to address the burden of student loans. Policymakers should:

- Forgive student loan debt for entrepreneurs who continually make capped loan payments for a certain period of time through the Pay As You Earn (PAYE) or Income-Based Repayment (IBR) programs.
- Create a federal Student Loan Deferral Plan that allows entrepreneurs faced with significant student loan burdens to apply to defer their student loans for an initial period of one year and for up to five years.

Enable Reach-Back Contributions to Retirement Savings Plans
Aspiring entrepreneurs may not take the risk of starting their own businesses because their current jobs help them save for retirement. To ensure potential entrepreneurs are not further inhibited from starting their own businesses because of worries over a lack of retirement savings, federal law should:

- Permit entrepreneurs to make “reach-back” contributions to their retirement accounts for a limited number of years, and to have the tax deferral apply to the current tax year in which those payments are made. This policy recognizes that entrepreneurs often do not have income in the early years of a new business to put toward retirement, and it gives those who are willing to take the risk of starting a business the ability to catch up on their retirement contributions and save for the future when they are more likely to have the means to do so.

Become A Champion For Entrepreneurs Now

Entrepreneurs and government operate at different speeds. As policymakers pursue the adoption of new policies to support everyday Americans opening new businesses, they can also leverage the unique powers associated with their public offices to champion entrepreneurs today. Below is a list of tangible, actionable steps that federal policymakers can pursue now.

- Use the State of the Union and other public addresses and events to highlight the importance of entrepreneurs to the American experiment and economy.
- Make a permanent director for entrepreneurship position within the White House whose job is to rationalize, coordinate, and improve federal policy as it relates to new business creation. Previous administrations housed an assistant director for entrepreneurship in the Office of Science and Technology Policy, but the position should be elevated.
- Ask the Congressional Research Service or Government Accountability Office to review the most significant federal regulations within select departments and agencies that affect the creation and growth of new businesses.
- Add “entrepreneurship” to the House Small Business Committee name. The Senate Small Business Committee was established in 1940, but in 2001, the name was changed to the Senate Small Business and Entrepreneurship Committee.17 The House committee should do the same.
- Request that the Small Business Administration (SBA) administrator examine ways the SBA can better support Americans starting new businesses, in addition to the role the agency plays in supporting established small businesses.
- Create a House Entrepreneurship Caucus to complement the recently established bipartisan Senate Entrepreneurship Caucus.
- Hold congressional hearings, including with entrepreneurs testifying, to guide the development and implementation of policies that reduce barriers to entrepreneurship.
- Support federal data collection efforts to better understand entrepreneurship at a granular level in order to appropriately target national and local interventions that reduce barriers to new business creation. When able, make data public for use by state and local governments, entrepreneur support organizations, and researchers.
